Update on Feasibility Study at Quintette

VANCOUVER, BRITISH COLUMBIA—(Marketwire - April 29, 2010) - Teck Resources Limited (TSX: TCK.A and TCK.B, NYSE: TCK) today announced that, given the favorable outlook for steelmaking coal demand, it is undertaking a feasibility study to potentially re-open the Quintette mine in northeast British Columbia.

"The Quintette feasibility study is part of our thorough evaluation of the various alternatives available to us to expand coal production," said Bill Fleming, Vice President, Operations for the coal business unit. "In addition to the relevant engineering and permitting work, we will also be actively engaging with First Nations, local communities and the appropriate regulatory agencies to ensure that all factors are considered as part of any ultimate decision to reopen the mine."

Teck expects to complete the study by the fourth quarter of 2011.

The Quintette mine is located approximately 22 kilometres from Tumbler Ridge, BC. Previous operations took place from 1982 to 2000.

About Teck

2010 Restricted Access Boundaries

A feasibility study has been undertaken to examine the possibility of reopening the Quintette mine. As a result, the Quintette mine site is currently active with a variety of staff and contractors working in several locations.

Restricted access boundaries have been established for the safety of these people, as well as the general public. Please respect the boundaries, for everyone's well-being.

Note: These boundaries are approximate, so please use posted signs as field reference.

Use at your own risk.

For more information please contact the Quintette mine site.
